

PIPETRACE|ECO

FIRST
TRACE HEATING
DIRECT

FROST PROTECTION THE EASY WAY THE ENERGY EFFICIENT TRACE HEATING

PipeTraceECO is designed specifically for domestic water pipes that are prone to freezing over the cold winter months.

Each heater comes complete with an inline thermostat and 1metre supply lead.

Simply attach the heater to the pipework, insulate the pipe and connect into a local 230V power supply.

The inline thermostats are designed to switch prior to the contents freezing making it extremely energy efficient.

- Based on a 2 metre heater the running costs are less than 0.4 pence/hour when activated
- Designed to be fitted by a competent installer
- Self regulating heating cable, no need to install aluminium foil tape to the pipework
- Can be used on the following:

Loft pipework

External pipework

Agricultural pipework

Caravan/Holiday homes, hot/cold domestic external pipework

Many more domestic applications

Suitable for all plastic/metal pipework
